

The SGBM is built around investigators from seven different research areas of life sciences and medicine at the University of Freiburg and the [Max Planck Institute for Immunobiology and Epigenetics](#) . Research focuses on:

[Protein Structure and Function](#)

[Synthetic Biology and Signalling](#)

[Developmental Biology](#)

[Neurosciences](#)

[Immunology and Virology](#)

[Molecular Medicine](#)

[Molecular Plant Sciences](#) .

A large number of SGBM principal investigators are also affiliated with the Excellence Clusters [CIBSS](#) (Centre for Integrative Biological Signalling Studies), [BIOSS](#) (Centre for Biological Signalling Studies) and [BL-BT](#) (BrainLinks-BrainTools) and these 4 programs closely cooperate.

More information on the research carried out by each principal investigator as well as eventual membership in BLOSS and BL-BT is indicated in the corresponding profile. To look for an individual profile either consult "[Our principal investigators](#)" or click on the list found in each of the research areas.

For information about CIBSS PIs who are currently recruiting via SGBM, please visit [this page](#).
